

# STIPPLING PRICE SHEET - DIAGRAM

**Basic Stippling Base Price: \$75** Ex: Small Dot (not as aggressive as others), Standard Dot (the most common requested), etc.

**Slight Frame Reduction: \$50** Ex: Removal factory texturing, excess material creating a different shape, etc.

**Full Frame Reduction: \$75** Ex: Removal of finger grooves, in addition to the above, etc.

**Standard Outline: \$50** Basic stippling will still end and create a design on the frame. The "Standard Outline" is recessed slightly at the end/edge of the stippling to create a clean look or more defined look.

**Hard Outline: \$75** The "Hard Outline" can either be a "channel" look outline or can be done deeper than the "Standard" allowing a deep recessed look which really brings out the overall design/pattern of the framework.

**Single Trigger Guard Undercut: \$40** Most commonly done to allow a higher grip and better overall feel.

**Double Trigger Guard Undercut: \$65** In addition to the added benefit of a higher grip, the double undercut allows the support hand to have an area for reference and/or finger placement. \*Add an additional \$10 for stippling on the double undercut.

**Molding Beaver-tail: \$75** If your frame is capable of accepting a beaver-tail, molding the beaver-tail section to the rear of the frame can create a total different feel overall due to the longer length of the frame and more surface area for your hand to grab and for most, makes the pistol frame feel more comfortable/natural.

**Magazine Release Relief Cut: \$20** Allows for easier reach/push on magazine release button.

**Shooters Cut: \$45** Straight or angle edge for support hand.
